As a valued HFD customer, we can offer you an exclusive service that gives you access to the only purpose built and certified Tier III datacentre in Scotland.

DataVita specialises in innovative, agile data services to drive Scotland's business future. The Fortis Datacentre, located in the heart of Scotland, provides the most advanced, scalable and secure colocation and integrated cloud service. Opened in 2016 the datacentre is Scotland's largest and most advanced purpose-built facility. It houses up to 2,000 racks, all powered by 100% renewable energy.

With a Power Usage Effectiveness (PUE) of 1.18, the centre can provide significant cost savings to organisations who choose to move away from inefficient in-house computer rooms to colocation solutions.

Let us help you grow your business with colocation hosting and integrated cloud services.

IT HARDWARE

If HFD already provide your internet services, then you're already connected to the datacentre. You can benefit from this connection to deliver your IT services quickly and securely.

DataVita can relocate your IT hardware to the datacentre and will ensure that your server estate and equipment is safe, sound and running 24 hours every day with a 100% Service Level Agreement, unprecedented security and a simple clear billing process.

From half a rack to full pods, or even your own data hall, DataVita has the capability to manage all your colocation needs with resilient power, connectivity and cooling.

Benefit from security, compliance and complete control of your business-critical data.

CLOUD

Achieve significant cost-savings and real revenue growth by migrating to Cloud Services.

- Expand and contract your Cloud-based applications to meet operational needs
- Change and configure applications to keep your business at the forefront
- Reduce expenditure on software and hardware

Our Cloud Infrastructure allows you to easily compute, network and store resources in any one of the established deployment models:

- Private Cloud   • Hybrid Cloud   • Public Cloud

THE NETWORK

All HFD Sites are connected via multiple 10GB connections back to The Fortis Datacentre where they connect with all major network providers. This will give you the highest level of connectivity and all the access you need to Datavita's core network, your core network and the internet.

All customers will receive 100Mb bandwidth within the datacentre at no extra cost.

DATAVITA
Where your data comes to life

BACKUP & RECOVERY

Backup
DataVita simplifies backup and recovery for both physical and virtual environments. The service provided eliminates traditional backup software by integrating data orchestration, catalogue management and duplicated storage into a single, scale-out service.

Recovery
Datavita's disaster recovery service enables replication of critical services between virtual platforms for a quick recovery from on premise infrastructure or between any DataVita Cloud services. Two full data recovery tests are included each year with the ability to simulate fail-overs without impacting your production services.

Your backup data will be stored in the Fortis Datacentre, providing unapparelled security and resilience.

WHY DATAVITA?

UPTIME	SECURITY	LOCATION
Fortis is Scotland's only Uptime Institute, Tier III certified datacentre, offering a 100% Service Level Agreement	The purpose-built datacentre has unmatched levels of physical security, compliance and governance	Based between Glasgow and Edinburgh

FLEXIBILITY	CLOUD	VALUE
Scale your services (up or down) quickly and whenever you need to with a flexible outlook, blending traditional Colocation and Cloud	Private to public bespoke Cloud services tailored to ensure your requirements and are met and exceeded	Reduce costs, improve delivery and accelerate transformation

GET IN TOUCH

From the smallest to the largest IT requirement, Datavita offers a full spectrum of solutions. The Fortis datacentre is completely secure, highly resilient and designed to cope with all computing demands.

The expert team will work with you to build the hosting environment that best meets your business requirements, allowing you to take advantage of the huge growth in cloud computing wherever your business is.

To find out how DataVita can assist you on your journey to the cloud (and beyond) contact Rosemary Hill at **rhill@hfdgroup.com**

You can also arrange a visit and tour of the Datacentre and its facilities.
